Contents of JSA Vol. 20, No. 3 (2014) 154-237

Proceedings of the 6th International Symposium on Practical Surface Analysis (PSA-13)
November 10-15, 2013, Okinawa convention center, Okinawa, Japan

Preface
Practical results and universal truths in surface analysis  S. Hashimoto • • • 154

Prenary Lecture
New Data Resources and Applications for AES and XPS  (Invited)  C. J. Powell • • • 155

Standardization and pre-standardization
Repeatability of Spectral Intensity Using an Auger Electron Spectroscopy Instrument Equipped with a Cylindrical Mirror Analyzer
*A. Kurokawa, S. Terauchi and M. Ito • • • 161

Data analysis and treatment
Estimation of IMFP except for a constant factor using only XPS background-optimized peak intensities and cross sections  *M. Jo • • • 166

Novel techniques and instrumentations
Characteristics of Charged Droplet Beams Produced from Vacuum Electrospray  (Invited)
*S. Ninomiya, Y. Sakai, L. C. Chen and K. Hiraoka • • • 171
Evaluation of Detection Efficiency of Atom Probe Tomography
*M. Morita, M. Karasawa, T. Asaka and M. Owari • • • 177
Direct Depth Measurement Tool of High Aspect Ratio Via-Hole for Three-Dimensional Stacked Devices
*M. Nakamura, H. Kitada and S. Sakuyama • • • 182

Activities of SASJ Working Group
Analysis of TOF-SIMS spectra using quaternary ammonium ions for mass scale calibration
*D. Kobayashi, S. Otomo and H. Itoh • • • 187

Applications I (semiconductor, ceramic, metal, etc.)
Identifying of boron in FSW steel samples through SIMS technology  (Invited)
Excess Volume in Grain Boundary Segregation
*P. Lejček, L. Zheng and Y. Meng • • • 198
Comparative Study on Nondestructive and Destructive Methods of Evaluating Thicknesses of Hot-dip Galvanized Coatings
*Y. Higashi and T. Sawada • • • 202
Depth Analysis of Ta/NiFe/Ta/CoFeB/Ta/NiFe Multilayer Thin Films: Comparison of Atom Probe Tomography and Auger Electron Spectroscopy
*M. Kubota, Y. Ishida, K. Yanagiuchi, H. Takamizawa, Y. Nozawa, N. Ebisawa, Y. Shimizu, T. Toyama, K. Inoue and Y. Nagai • • • 207
Reduced Preferential Sputtering of TiO₂ using Massive Argon Clusters
*J. D. P. Counsell, A. J. Roberts, W. Boxford, C. Moffitt and K. Takahashi • • • 211
Applications II (bio, organic, composite, etc.)
Degradation of organic silane monolayers on silicon wafer during XPS measurement

A Synchrotron Radiation Photoelectron Spectroscopic Study on the Oxidation of Si in Diamond-like Carbon Film by Hyperthermal O-atom Beam
*K. Yokota, M. Tagawa, A. Yoshigoe and Y. Teraoka 221

Mechanism of hologram formation on glass surface by recording technique with corona discharge

Study on interaction between phosphatidylcholine(PC) liposome and gold nanoparticles by TEM observation
*C. Tsukada, T. Tsuji, K. Matsuo, H. Nameki, T. Yoshida and S. Yagi 230

Member of the Committee of PSA-13
