PSA-10 is focused on the standardization, applications, and related topics in the field of the surface chemical analysis. Oral sessions are classified into all of topics. One remaining feature throughout the PSA series of symposia is the short presentations given by poster presenters. The 7th Korea-Japan International Symposium on Surface Analysis, particularly for the practical applications, will be held in conjunction with PSA-10 by representatives from Korea and Japan. All the participants are invited to join the session of Korea-Japan Symposium.

1. Scope of the PSA-10

The scope of this series of international symposia on the surface chemical analysis covers present status and future prospect of the surface analytical techniques in various practical and fundamental fields. Special emphasis on the actual problems is called, which have been arisen from the application of surface analytical technique such as Auger Electron Spectroscopy (AES), X-ray Photoelectron Spectroscopy (XPS), Electron Probe Micro-Analysis (EPMA), Secondary Ion Mass Spectrometry (SIMS), and Scanning Probe Microscope (SPM) for the variety of practical materials. The common problems for these techniques of reference materials, the depth profiling (3-D analysis), the beam damage (electrons, X-rays, and ions), pre-standards and international standards (ISO) are closely connected.

Topical sessions which would address important issues arising from the practical applications will also be scheduled. Fundamental researches for the improvements of the surface analytical techniques and development of noble methodologies to meet challenges from rapidly evolving nano and bio technology are also within the scope of this symposium. The education of young researches is also an important aim especially for Korea-Japan symposium that will be held in conjunction with PSA-10.

2. Manuscript Submission

Proceedings, accepted after peer review by appropriate referees, will be published in a special

issue of the Journal of Surface Analysis ('JSA' at <http://www.sasj.jp/>).

In order to shorten the reviewing and editing time, **electronic files** of your manuscript, a submission form and a copyright transfer form saved in a CD-ROM should be handed at the conference site on October 3, 2010. Accepted format of the manuscript are Microsoft Word 2003 (.doc). The template files are downloadable from the PSA-10 website:

<http://www.sasj.jp/PSA/PSA-10/Index.html>.

If you have any question and comments, please contact to the Editorial Committee of PSA10.

Yoshimi Abe (Mitsubishi Chemical Group Science and Technology Research Center, Japan)

Yongsup Park (Kyung Hee University, Korea)

editorial-psa10@sasj.jp

NOTE: Proceedings submission deadline is October 3, 2010 at the conference site.

3. Manuscript Format

Length

Invited: within 6 pages

Contributed: within 4 pages

Language

The manuscripts must be written in English.

Format

The final manuscript must be prepared in camera-ready form (Microsoft Word 2003 (.doc) format) according to the style below, also shown as this template.

A4 papers should be used. Top and bottom margins should be 2.5cm, and left and right margins should be 2.0 cm.

Title, author names, affiliations and addresses and e-mail address of the corresponding author should be centered.

The abstract should be 200 words or less.

The text must have two single-spaced columns.

The main font used throughout the article should be Times New Roman or Times. Font should be 18-point bold for title; 12-point for author, institution and addresses; 10-point for abstract; and 11-point for text.

The date received is the day on which the editor received the article. The Editorial Committee enters the date between the addresses and the abstract. Please leave blank lines for this purpose.

References to the literature should be numbered in the text in square brackets as follows:

Kato and Sekine [1], Hofmann [3], Yoshihara [5, 6], Suzuki *et al.* [10]

Enter references in the Reference section using the format below.

[1]M. Kato and T. Sekine, *Surf. Interface Anal.* **21**, 606 (1994).

[2] S. Hofmann, in *Practical Surface Analysis*, 2nd Edn., Vol. 2, ed. by D. Briggs and M. P. Seah, Chapt. 4, pp. 156-161, JohnWiley, Chichester (1990).

Figures are numbered Fig. 1, Fig. 2, Figs. 3a and 3b, etc. Photographs are numbered as figures (not Photograph 1, Photograph 2, ...). All of Figures should be prepared in formats of JPEG or TIFF (LZW compressed) and embedded in the manuscript. Figures can be prepared in color but note that all figures are appeared in black and white.

Tables are numbered Table 1, Table 2, etc.

The header on each page should be italicized and no longer than two lines. Font should be 9-point arial for the header.

4 Refereeing

Two independent referees will review manuscripts submitted to the Editorial Committee of PSA-10. Authors may suggest three appropriate referees upon submission. Proceedings, accepted after peer review by appropriate referees, will be published in a regular issue of the Journal of Surface Analysis, vol. 17, No.3.
